READ AND SAVE THESE INSTRUCTIONS

NOTE: Refer to Installation Instructions, Information and Operation Guides regarding the model you have purchased.

The MAXXFAN Dome fan is an exhaust fan only.

The MAXXFAN Dome fan installs into a 6 1/4 inch diameter opening.

To determine if your opening is correctly sized, simply remove the interior garnish trim ring of your existing vent and measure the opening or verify the opening is large enough by sliding the MAXXFAN Dome sleeve into the opening.

The MAXXFAN Dome is designed for a minimum roof thickness or wall thickness of 1 inch to a maximum of 6 inches.

The MAXXFAN Dome fan requires a minimum 12 Volt DC, 2 amp service. Confirm that the circuit you intend to use will accommodate the additional load. Circuit must be fused and use appropriate gauge stranded wire for electrical connections.

WARNING! TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

a) Use this unit in the manner intended by AIRXCEL, INC. If you have questions, contact the manufacturer.

b) Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.

CAUTION! FOR GENERAL VENTILATION USE ONLY. DO NOT USE TO EXHAUST HAZARDOUS OR EXPLOSIVE MATERIALS AND VAPORS.

WARNING! TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

Installation work and electrical wiring must be done by qualified persons(s) in accordance with all applicable codes and standards, including fire-rated construction.
INSTALLATION INSTRUCTIONS

STEP 1
The MAXXFAN Dome fan requires a minimum 6 1/4 inch diameter opening. If you are replacing another type already installed, remove the old existing vent. Remove all old sealant for a minimum of 2” entirely around the opening.

STEP 2
Prior to installing the MAXXFAN Dome in the opening, apply a continuous strip of BUTYL tape or equivalent to the underside of the flange in the groove provided.

CAUTION! When installing your MAXXFAN Dome fan, only use a caulking/sealant compatible with the flange (plastic product) and the roof surface. DO NOT use materials containing solvents such as or similar to Xylene, Toluene, Methyl Ethyl Ketone (MEK), Acetate or Acetone as they can damage the flange. Also, Polysulfide (Thiokol) type sealants must be avoided.
If in doubt, please contact the manufacturer of your RV.

STEP 3 (Roof Installation)
When inserting the MAXXFAN Dome fan into the roof opening:
- orient the fan with the button toward the front of the coach.
- ensure that the fan wires are hanging to the inside of the coach.
Center the fan in the opening.
Using the eight (8) screws provided, attach the flange to the roof at each dimple location along the flange.
Note: Opening the fan lid gives better access to the flange for assembling the screws.
Screw into the dimple to pierce the flange, making sure not to overtighten the screws to avoid cracking the flange.

STEP 4 (Roof Installation)
After the MAXXFAN Dome fan has been installed, remove the excess BUTYL caulk that may have squeezed out. Using a sealer such as Dicor self-leveling lap sealant or similar caulking, apply a daub over every exposed screw head. In addition, apply a bead (approximately 3/16” dia.) along the outside edge of the flange all the way around the fan.
Note: The Rain Shield can be installed on the roof. If there is a downward slope, it must be installed with the slots toward the downward slope.

THIS COMPLETES THE ROOF TOP PORTION OF THE INSTALLATION
STEP 3 (Wall Installation)
When inserting the MAXXFAN Dome fan into the wall opening:
- ensure that the fan wires are hanging to the inside of the coach.
Center the fan in the opening.
Using the eight (8) screws provided, attach the flange to the wall at each dimple location along the flange.
Note: Opening the fan lid gives better access to the flange for assembling the screws.
Screw into the dimple to pierce the flange, making sure not to overtighten the screws to avoid cracking the flange.

STEP 4 (Wall Installation)
After the MAXXFAN Dome fan has been installed, remove the excess BUTYL caulk that may have squeezed out. Use silicone to apply a daub over every exposed screw head. In addition, apply a bead of silicone (approximately 3/16” dia.) along the outside edge of the flange all the way around the fan.

STEP 4A
Center the Rain Shield over the fan with the slots facing downward as shown. Using six (6) screws provided, attach the rain shield to the wall at each dimple location along the flange. After the Rain Shield has been installed, use silicone to apply a bead of silicone (approximately 3/16” dia.) to seal around the perimeter of the rain shield. Apply a daub of silicone over every exposed screw head.

THIS COMPLETES THE OUTSIDE PORTION OF THE INSTALLATION
CAUTION!
Disconnect main vehicle power before connecting 12 volt DC power to the MAXXFAN Dome exhaust fan.

STEP 5
- If the roof/wall is thicker than 1 inch the extension sleeve must be used.
- A roof/wall that is 6 inches thick will use the full-length extension sleeve without trimming.

<table>
<thead>
<tr>
<th>VEHICLE ROOF/WALL THICKNESS</th>
<th>SLEEVE LENGTH TO CUTOFF</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>LED</td>
</tr>
<tr>
<td>6.0</td>
<td>NONE (use full length sleeve)</td>
</tr>
<tr>
<td>1.0 inch</td>
<td>Not Applicable, Sleeve not used</td>
</tr>
</tbody>
</table>

- If the roof/wall is between 1 inch and 6 inches, the extension sleeve may need to be trimmed.
- Measure the distance from the vehicle ceiling/wall to the base of the MAXXFAN Dome fan. Cut the extension sleeve longer than the dimension measured to accommodate the depth of the garnish ring. Refer to table below for additional length required.

NOTE: Mark and cut the extension sleeve per figure 5 shown above.

STEP 6 Non-LED MAXXFAN Dome
Using the supplied wire splices, connect the Positive (+) 12VDC supply wire to the MAXXFAN Dome fan wire marked “POS 12VDC” and the Negative (-) 12VDC supply wire to the MAXXFAN Dome fan wire marked “Neg. 12VDC”.
- If the sleeve is needed, insert the sleeve into the garnish ring positioning the notch in the sleeve to line up with the wiring.
- Raise the garnish ring to the ceiling/wall ensuring that the garnish ring is centered over the fan opening.
- If using the sleeve, the sleeve will overlap the base that extends in the opening. This will help center the garnish ring in the opening.
• Ensure that the wires are not pinched. The wires should be routed on the outside of the sleeve. The excess wire should lay in the garnish ring to keep them contained.
• Secure the garnish ring to the ceiling/wall with the four (4) screws provided in the small parts package.
• Reconnect the main vehicle power to the MAXXFAN Dome.

This completes the installation of the MAXXFAN Dome exhaust fan.

STEP 7 LED MAXXFAN Dome
Using the supplied wire nuts, connect the Positive (+) 12VDC supply wire to the MAXXFAN Dome fan wire and the LED light wire marked “POS 12VDC” and the Negative (-) 12VDC supply wire to the MAXXFAN Dome fan wire and the LED light wire marked “Neg. 12VDC”.
• If the sleeve is needed, insert the sleeve into the garnish ring positioning the notch in the sleeve to line up the wiring.
• Raise the garnish ring to the ceiling/wall ensuring that the garnish ring is centered over the fan opening.
• If using the sleeve, the sleeve will overlap the base that extends in the opening. This will help center the garnish ring in the opening.
• Ensure that the wires are not pinched. The wires should be routed on the outside of the sleeve. The excess wire and wire nuts should lay in the garnish ring to keep them contained.
• Secure the garnish ring to the ceiling/wall with the four (4) screws provided in the small parts package.
• Reconnect the main vehicle power to the MAXXFAN Dome.

This completes the installation of the MAXXFAN Dome fan.
OPERATION OF YOUR MAXXFAN Dome fan

- To open the MAXXFAN Dome lid push the button on the handle to dis-engage the clip and slide the handle away from you until the clip engages the upper opening.
- To close the lid, push the button on the handle to dis-engage the clip and pull the handle toward you until the clip engages the lower opening.
- Operation of your MAXXFAN Dome simply entails pushing the ON/OFF button on the fan to activate the exhaust fan.
- The optional LED lighting on the garnish ring is operated by the push button on the garnish ring. The LED lighting and fan operate independently.
- Close the lid to impede infiltration of air when exhaust fan is not in use.
- The MAXXFAN Dome fan should not be operated with the lid closed.

USER INSTRUCTIONS SERVICING

Cleaning of your MAXXFAN Dome may be achieved with mild soap and water only. The screen can be removed for cleaning by removing the four (4) screws. Before removing the screen for cleaning, ensure the fan is turned to the OFF position.

CAUTION: Do not operate the fan with the screen removed.

The MAXXFAN Dome fan has a 5 amp fuse. To access the fuse, turn the fuse cap to the left to remove the cap. Replace the fuse with a 5 amp, type GMA fast acting fuse. Replace the fuse cap to secure the fuse in the fuse holder.
